PREPARED FOR

[Your Business Name]

[City, State]

PROPOSAL DATE
July 3, 2026

VALID THROUGH
August 31, 2026

YOUR ART ON DISPLAY. YOUR BRAND IN THEIR HANDS.

An interactive kiosk turns a waiting room, lobby, or retail floor into an always-on showcase. Clients browse a full portfolio, explore flash sheets, scan a QR code to book, and check pricing — hands-free for your staff, running the whole time the doors are open.

It gives every visitor a professional, branded experience the moment they walk in — a polished display that stands in for a printed binder, a phone handed across the counter, or a question sent to the front desk. The kiosk is always there, always current, and always on-brand.

Once it is installed, it runs itself. Content updates happen remotely, and the display keeps working around the clock without anyone tending to it.

WHAT CHANGES FOR YOU

- **Your portfolio is always visible** — clients see your full body of work the moment they arrive, with no phones to pull up and no binders to hand over.
- **Clients engage while they wait** — browsing the gallery and flash sheets fills the wait with something worth looking at, and time at the counter becomes time well spent.
- **Every visitor gets a strong first impression** — a professional, always-on display builds confidence before the first conversation even starts.

SOFTWARE, INSTALLATION, AND TRAINING — ALL HANDLED.

You purchase your own hardware from the spec sheet on the next page. What follows is everything we build, install, and configure on top of it.

THE SOFTWARE

- **Custom-built kiosk application** — designed around your brand, your gallery, and your content.
- **Touch-optimized gallery** — swipe navigation built for a public touchscreen, not a repurposed website.
- **Automatic screensaver mode** — cycles through your content when idle and wakes instantly on touch.
- **Fullscreen kiosk mode** — a clean display with no browser interface, just your content.
- **Responsive design** — the same content adapts cleanly to any screen size, now or if the hardware changes later.
- **QR code integration** — links straight to your booking page or social profiles.

INSTALLATION & TRAINING

- **On-site hardware assembly** — the full setup is installed and tested in your space.
- **Display calibration and touch configuration** — every screen is tuned for accurate, responsive touch before we leave.
- **Content loaded and tested** — your artwork, photos, branding, and QR codes are in place and verified before launch.
- **Hands-on training** — you and your team learn exactly how to update content going forward.

WHAT TO HAVE ON HAND BEFORE INSTALLATION DAY.

You purchase the hardware directly — that means full ownership, full warranty coverage, and full control over brand and budget. Below is exactly what to buy, with approximate pricing so you can budget with confidence. We are glad to recommend specific models and confirm compatibility before you order.

ITEM	NOTES	APPROX. PRICE
32" commercial-grade touchscreen	Capacitive display built for continuous public use	\$500 – \$700
Dedicated PC	Runs the kiosk independently, always on	\$250 – \$350
Professional mounting	Floor stand or wall mount, sized for your space	\$150 – \$250
Cables & connections	Everything needed to power and run the display	\$50 – \$100
Low-voltage wall covers	Clean plates that conceal cabling at the wall	\$50 – \$100
Total hardware budget		~\$1,200

*Equipment pricing is a baseline estimate and may vary based on client hardware preferences and sourcing.

HOW WE HELP

We provide exact model recommendations for each item and confirm compatibility with the kiosk software before you buy. Once your hardware is ordered, we coordinate delivery timing with the installation schedule. You keep the equipment, the receipts, and the warranty.

PLUG IN. POWER ON. IT RUNS ITSELF.

From power-on to closing time, the kiosk manages itself — here is what a day with it actually looks like.

- The kiosk powers on with the PC and boots directly into fullscreen mode — no login, no setup, no staff involvement.
- A branded splash screen greets every visitor as the display comes to life.
- Clients tap to browse, swiping through the gallery at their own pace.
- A tap zooms into any piece for a closer look at detail and line work.
- A QR code on screen links straight to your booking page.
- After two minutes idle, the screensaver takes over and auto-cycles through your content.
- A tap anywhere wakes the display and picks right back up.

BUILT FOR THE REAL WORLD

The system is designed to keep running without anyone watching it: it auto-restarts after a power outage, uses Wake Lock to keep the display from sleeping, has pinch-zoom disabled to prevent accidental gestures, and activates the screensaver automatically during idle periods. It is built for environments where nobody is standing by to babysit the screen.

WHAT THIS WOULD COST ANYWHERE ELSE.

The price reflects a production-grade kiosk platform already running live installations. Because you source your own hardware from the spec sheet, this compares the software, installation, and training against standard market rates for those services alone.

COMPONENT	MARKET RATE	YOUR PRICE
Custom kiosk software development	\$3,000 – \$10,000	\$1,500
Content setup and configuration	\$500 – \$1,500	\$300
Professional installation	\$500 – \$2,000	\$500
Touch calibration and training	\$300 – \$800	\$200
Total market range	\$4,300 – \$14,300	\$2,500

WHY THE DIFFERENCE

The kiosk software is built on the same production-grade platform already running live installations — not built from scratch for each client. Because you purchase your own hardware directly, this price covers only the software development, installation, configuration, and training. No markup on equipment, no bundling — just the service, priced on its own.

EQUIPMENT TRANSPARENCY

You source your hardware directly from the spec sheet, choosing whatever brand or vendor fits your space and budget. We advise on model selection and confirm compatibility before you buy, but the purchase, the receipt, and the warranty are yours.

FLAT RATES. FULL TRANSPARENCY. FULL SUPPORT.

ITEM	FREQUENCY	PRICE
Interactive Kiosk Package Custom kiosk software, content setup and integration, on-site installation and configuration, and hands-on training — every component itemized above. Hardware is purchased separately from the spec sheet.	One-time	\$2,500
Maintenance & Support Hosting, remote troubleshooting, software updates, and content change requests.	Monthly	\$100/mo 3-mo min · cancel anytime after
Add-On Features Additional screens, analytics dashboards, remote content management, custom interactions, QR tracking, and event-mode rentals.	Per scope	From \$300 quoted before work starts

WHAT COMES WITH EVERY KIOSK

30 days of post-installation support — direct access to troubleshoot and fix anything that comes up after launch.

Content updates during the first month — included as part of getting the kiosk fully dialed in.

Remote troubleshooting — most issues are resolved without a site visit.

Replacement coordination — if any hardware component needs attention, it is coordinated and handled.

WHAT IT COSTS TO START, AND WHEN IT LANDS.

TIMELINE & PAYMENT TERMS

\$1,250 deposit to begin. Balance of \$1,250 due on installation day. Software development begins immediately and runs in parallel with your hardware order. Order your equipment from the spec sheet as soon as you are ready — once it arrives, installation is scheduled and completed within days.

Acceptance. Reply by email or text with "*approved*" to receive the deposit invoice.
