PREPARED FOR

Kattitude Tattoo Studio

Austin, Texas

DOCUMENT DATE

August 7, 2026

STATUS

Build in testing

THE WORK IS YOURS. IT ALWAYS WAS.

This is the short version, and nothing else in this document changes it:

Kattitude Tattoo Studio owns the website, the source code, and all customer data. That language is already in the Phase 1 proposal, and it is restated here so it is easy to find rather than buried in an acceptance paragraph.

Ownership does not depend on which account the site happens to run from, who pays the hosting bill, or whether we are still working together. Those are operating arrangements. They can change at any time without touching who owns what.

YOURS, OUTRIGHT

- **The source code** — the complete application built for Kattitude, including the dashboard, artist portal, booking flow, waiver system, and landing page. Delivered as a full repository you can hand to any developer.
- **All customer and studio data** — client records, appointment history, deposits, signed waivers, reference photos, artist schedules. Full export available any time, in standard formats, without notice or reason given.
- **Your brand and content** — artwork, photography, copy, flash sheets, artist profiles. These were yours before this build and remain yours after it.
- **Your domain** — kattitude.com is registered to you and stays that way. Nothing in this engagement transfers or encumbers it.
- **The kiosk hardware** — purchased directly by you from the spec sheet, so the warranty and the equipment are in your name from day one.

MINE, AND NOT BILLED TO YOU

- **Development tooling** — the AI development plan, editors, and build tools used to produce the work. My overhead, covered inside the build cost.
- **Hosting infrastructure during the build** — the deployment environment the app runs on while it is being built and tested. Covered the same way. See the next page for what happens to it at launch.

THE ONE-SENTENCE VERSION

You own the thing. I own the pipe it currently runs through — and the pipe is replaceable, transferable, and yours to take over whenever you want it.

WHY EVERYTHING CURRENTLY SITS UNDER MY ACCOUNT.

We are in testing. During a build, the application runs on a preview deployment inside my hosting account — that is what gives you a live link to click through while features are still landing, and it is why the account name you see attached to everything is mine.

This is deliberate and temporary. Standing up separate billing, separate accounts, and separate credentials for a system that is still changing daily would slow the build down and cost you money before the thing works. So during testing, it runs on my infrastructure, at my expense, and you get the link.

WHAT A HOSTING ACCOUNT ACTUALLY IS

The hosting platform is where the code gets built and served from — the delivery mechanism between the source code and the browser. It stores no ownership rights, no exclusive copy of the code, and nothing that cannot be pointed somewhere else. The code lives in a repository. The data lives in a database. The hosting account simply serves it.

A useful comparison: the hosting account is the delivery route, not the building. Changing who drives the truck does not change who owns the address.

WHERE WE ARE IN THE SEQUENCE

- **Now — Testing** — the app runs on a temporary preview deployment under my account. You review, click through, and give feedback. Nothing is public-facing yet.
- **Next — Launch** — once testing is signed off and the system works, it moves onto the Kattitude domain. The temporary preview address stops being the way you reach it.
- **Then — Ongoing** — the system runs under your domain, either hosted by me under the retainer or under your own account with me added as a developer. Your call, covered on page 5.

TO BE EXPLICIT

The temporary preview address is not the finished product and was never intended to be. Launch means the system lives at kattitude.com, not at a deployment link you have to go look up.

EXACTLY HOW IT COMES ACROSS TO YOU.

A handover is a configuration change, not a rebuild. Every piece has a defined transfer path, and none of them require the application to be rewritten, re-tested, or taken offline for any meaningful length of time.

THE STEPS, IN ORDER

- **01 · Sign-off on testing** — we agree the system does what it is supposed to do. Nothing moves until you have actually used it and are satisfied.
- **02 · Source code delivered** — the repository is transferred to an account in your name, or exported as a complete archive if you would rather hold it that way. This is the deliverable a future developer would need, and it is handed over in full.
- **03 · Hosting account established** — if the system is to run under your own hosting account, it is created in your name and the project is transferred into it. I am added as a developer so I can keep maintaining it. Roughly a ten-minute operation.
- **04 · Domain connected** — kattitude.com is pointed at the application. This is a DNS change on a domain you already control, made by you or by me with your access, and it is reversible.
- **05 · Database and payments in your name** — the database project and the Stripe account are transferred or re-created under your ownership, with the data migrated intact. Deposits land in your account, not through mine.
- **06 · Credentials handed over** — every login, key, and administrative account associated with the platform is documented and delivered. Nothing is retained that you do not have a copy of.
- **07 · Walkthrough** — a working session covering where everything lives, how to update content, and what to hand a future developer. Recorded if you want it kept.

NO EXIT FEE, NO HOSTAGE-TAKING

There is no charge for a handover and no notice period required to request one. If you want the full transfer on day one of launch, that is a supported path, not a penalty. The retainer is for maintenance you want, not access you are being denied.

THREE ARRANGEMENTS. ALL OF THEM KEEP THE CODE YOURS.

ARRANGEMENT	HOW IT WORKS	WHAT IT COSTS YOU
Hosted by me The default at launch. Simplest path, nothing for you to administer.	Runs under my hosting account, served at kattitude.com. Hosting and domain management stay my overhead, covered by the retainer.	Retainer only no separate hosting bill
Your account, me as developer The cleanest long-term setup, and my recommendation once the platform is established.	Hosting account created in your name. I am added as a developer to build and maintain. You can remove my access at any time and nothing moves or breaks.	Retainer + hosting hosting billed to you directly
Full transfer Available at any point, including immediately at launch.	Everything moves to accounts in your name — code, hosting, database, payments, credentials. You continue with your own developer or none at all.	No charge handover is not billed

THE KIOSK, SPECIFICALLY

The kiosk is a standalone installation and does not depend on any of the above. Per the equipment spec sheet, it runs on its own dedicated PC in the studio — purchased by you, owned by you — which powers on and boots straight into the display with no login and no staff involvement. It does not need a Kattitude web address to work, and putting it on one is optional rather than a step in the plan.

If you later want the same display reachable from your own web address as well, that is a routing change and not a rebuild. It is worth deciding on its own merits, not as part of the ownership question.

ON THE STUDIO PLATFORM'S ADDRESS

kattitude.com currently points at an existing storefront. Depending on how that is configured, the studio platform may sit at the main address or at a dedicated address on your domain. Either way it is your domain and your address — we will confirm the exact setup before the cutover, not after.

NOTHING HERE IS CONTINGENT ON US STAYING TOGETHER.

The reason to put this in writing is simple. You should not have to take anyone's word for what happens to your studio's system if circumstances change. Every answer below is a commitment, not a reassurance.

STRAIGHT ANSWERS

- **Is the code mine?** — Yes. The website, the source code, and all customer data belong to Kattitude Tattoo Studio.
- **Do I need my own hosting account?** — Not required. Available whenever you want it, and recommended once the platform is established.
- **Can it move to my domain?** — Yes. For the studio platform that is the plan at launch — the temporary deployment address is a testing convenience, not the finished product. The kiosk is separate and runs standalone on its own PC, with a web address optional.
- **What if we stop working together?** — You keep everything, and I hand over the credentials and the code. No exit fee, no notice period, no negotiation.
- **What if something happens to me?** — The code and data are exportable at any time and readable by any competent developer. You are never dependent on a single person to keep operating.
- **Can I get my data out right now?** — Yes. Full export, any time, on request, without a reason given.

WHERE WE ARE TODAY

The application is built and in testing. Once testing is signed off and the system is confirmed working, the next step is the move onto the Kattitude domain — off the temporary deployment address and onto your own. No decision about ownership or accounts needs to be made before then, and none of the options above expire.

Acknowledgement. This document restates and clarifies terms already contained in the Phase 1 and Kiosk proposals. It introduces no new charges and no new scope. Where anything here differs from a signed proposal, the terms more favourable to Kattitude Tattoo Studio apply.
